

MAXIME LAURENT

AI Data Engineer | GenAI · Machine Learning · Azure Cloud

Melbourne, VIC (relocating) • +33 6 70 13 34 04 • maxime.laurent02@icloud.com
linkedin.com/in/maxime-laurent-3866a3209 • Portfolio: <https://maximel34.github.io/>

PROFESSIONAL SUMMARY

AI Data Engineer with production experience taking GenAI and machine-learning solutions from business framing to cloud deployment. Delivered **15+ AI and data projects across healthcare, construction, insurance and luxury** at Talan (Paris), including a multi-LLM medical coding pipeline that reached **92% accuracy on primary diagnoses versus an 80% human baseline** across a 2.2M-hospital-stays-per-year scope. Comfortable owning the full loop — stakeholder workshops, model build, Kubernetes deployment — with the audit trail and compliance regulated industries demand. **RMIT University alum (2024 Melbourne exchange)**, returning to Melbourne to build with a local team.

TECHNICAL SKILLS

Generative AI & LLMs: Azure OpenAI (GPT), Claude (Anthropic), Gemini, Mistral, Grok · LangGraph multi-agent orchestration · RAG (FAISS, pgvector) · LLM benchmarking & evaluation · NER pseudonymisation · Copilot Studio · Ollama (self-hosted)

Machine Learning: Python, XGBoost, SHAP explainability, Pandas, feature engineering on relational data, batch scoring, FastAPI model serving

Cloud & Data Engineering: Microsoft Azure (AKS, Key Vault, AI Foundry), Docker, Kubernetes, Helm, ArgoCD (GitOps), PostgreSQL + pgvector, SQL, ETL, data modelling

Analytics & BI: Power BI, DAX, KPI dashboards, Master Data Management (MDM), data quality

Delivery: client workshops & framing documents (English/French), GDPR & health-data compliance, agile, React (validation UIs)

PROFESSIONAL EXPERIENCE

AI Data Engineer — Talan (IT consulting, Paris)

2025 – Present

Consultant delivering AI and data workstreams for enterprise clients across four industries.

Ramsay Santé — Europe's leading private hospital group (healthcare)

- Owned an end-to-end multi-LLM ICD-10 medical coding pipeline: benchmarked GPT, Gemini, Mistral, Grok and Claude with a weighted hierarchical scoring framework, RAG (FAISS), NER pseudonymisation (Docker API) and a React validation UI — pilot reached **92% accuracy on the primary diagnosis vs an 80% human baseline**.
- Designed the LangGraph multi-agent architecture (coder → QA → arbitration) to scale coding across a 2.2M-inpatient-stays-per-year scope.
- Built a hybrid LLM + deterministic Python pipeline detecting billing rejections : diagnosed an Azure GPT model-version drift (**80% → 59–72%**) and drove client adoption of the hybrid design; extended it to predictive rejection scoring with XGBoost + SHAP — chosen over LLM fine-tuning for auditability and cost.
- Architected an automated public-funding watch platform, validated with the client's Azure architect: PostgreSQL + pgvector (HNSW, 3072-dim embeddings), Key Vault CSI, Helm + ArgoCD deployment on AKS; authored bilingual framing documentation.
- Drove the Master Data Management workstream (golden records, data-quality rules) and owned Power BI reporting (data modelling, DAX, executive dashboards on billing, rejections and coding performance).

DEGAINE (VINCI Construction) — heritage restoration

- Replaced a paid tender-watch subscription with an automated monitor of French/EU public procurement APIs (BOAMP/TED): LLM triage with Mistral Small on Azure AI Foundry eliminated keyword false positives; defined the go/no-go tender scoring.
- Designed and led a client workshop on agentic AI for cost pre-estimation — dedicated estimation skill, 33-line unit price schedule, live demo on a listed monument's real specification.

Chanel — global luxury house (HR)

- Designed and rolled out Copilot Studio AI agents that create and reformat job descriptions — consistent, on-brand postings generated in minutes instead of from a blank page.

Insurance — GIS value framing

- Framed geospatial use cases for insurers (risk analysis, exposure mapping, territorial pricing) and built a sales-ready interface presenting each use case per prospect profile, with gains scaled to their revenue.

Talan internal R&D — agentic platform

- Built an in-house agentic staffing platform: semantic offer-to-consultant matching (RAG, FAISS) and AI agents auto-reformatting consultant CVs against a target offer — tailored profiles in seconds instead of manual staffing.

Consulting mission (certified) — INSA Rouen Normandie 2024 – 2025

- Drove a certified client mission in real conditions: data migration POC to a clean, structured, documented database (modelling, cleansing, transformation rules), then delivered actionable business KPIs on the migrated data.

EDUCATION

MSc-level Engineering Degree (Diplôme d’Ingénieur) — Computer Science & IT 2020 – 2025

INSA Rouen Normandie, France — French Grande École of engineering. Databases, algorithms, software development, statistics and data analysis, project management.

Exchange Semester — RMIT University, Melbourne 2024

Six months of English-taught coursework: Machine Learning, Data Science, Cryptocurrency & Blockchain, Networks.

PERSONAL PROJECTS

- Self-hosted LLM inference server (homelab): WSL2 + Docker + Ollama on RTX 5070 Ti, secured via Cloudflare Tunnel — used to evaluate open-source models (medical ones included) before client use.
- Portfolio website hand-coded in vanilla HTML/CSS/JS (bilingual EN/FR, light/dark theme) — maximel34.github.io/CV.

ADDITIONAL INFORMATION

Languages: English (fluent — studied and lived in Melbourne), French (native).

Work rights: Skills in Demand Visa (subclass 482)

Availability: relocating to Melbourne, VIC — available from march 2027.
